

Have Fun Host Guide

This folder contains the Windows version of Have Fun, a local LAN party-game app.

Run the App

Double-click:

```
app.bat
```

This starts the app, opens the host computer's browser, and uses port 3333.

You may need to run `app.bat` as an administrator from `cmd`, especially if Windows Firewall blocks other devices from connecting.

The browser opened by the launcher becomes the Host automatically. There are no accounts, passwords, or cloud services.

Invite Players

The home page shows a player registration URL and QR code.

Players should:

1. Join the same Wi-Fi/LAN as the host computer.
2. Open the displayed URL or scan the QR code.
3. Enter a display name.
4. Wait for the Host to start a round.
5. Read the game rules at the top of the page.

If players cannot open the link, check:

- They are on the same Wi-Fi/LAN as the host computer.
- Windows Firewall allows the app or port 3333.
- The network is not blocking device-to-device connections.

Start a Game

On the host computer:

1. Start the app.
2. Wait for players to register.
3. Open a game from the app menu.
4. Select a game file.
5. Set the round time limit.
6. Click **Start**.

The Host can watch results, stop the active round, and start the next prompt from the selected file.

Sentence Scrambler

Open Sentence Scramble from the app menu. Players arrange shuffled words into the original sentence.

Files are stored here:

```
assets\sentence-scrambler
```

Each .txt file is one selectable sentence set. Put one playable sentence on each non-empty line.

```
The quick brown fox jumps over the lazy dog.  
Never jump over the lazy dog quickly
```

Tip: You can capitalize the first letter and/or add a period at the end of the sentence to make the game easier.

Word Scrambler

Open Word Scrambler from the app menu. Players arrange shuffled letters into the original word.

Files are stored here:

```
assets\word-scrambler
```

Each .txt file is one selectable word set. Put one playable word on each non-empty line.

```
Planet  
browser  
Keyboard
```

Tip: You can capitalize the first letter to make the game easier.

Formula Scrambler

Open Formula Scrambler from the app menu. Players arrange shuffled formula characters into the original equation.

Files are stored here:

```
assets\formula-scrambler
```

Each .txt file is one selectable formula set. Put one playable formula on each non-empty line.

```
2 + 3 = 5  
4 * 6 = 24  
12 /3 =4
```

Tip: Formulas are split on spaces. All characters without spaces appear together in one tile, making the game easier.

Restart the app after adding or changing files.

Restart Behavior

Have Fun keeps game state in memory. Restarting the app clears registered players, active rounds, submissions, and scores.
